Sorry for the delay in posting this. Some how time ran away...

What this paper seems to me to be lacking is a connection to the ongoing debate on AMOC diagnostics. As well as Weber & Drijfhout mentioned by reviewer 2, there are a number of more recent papers addressing similar issues, including papers from the same KNMI group and others such as, Sijp et al J. Clim. 2011, and Liu & Liu J. Clim. 2012. By addressing these issues, this manuscript should better fulfill its potential usefulness to the community.

It would be helpful if you can include a diff file with your revised manuscript.
