Received and published: 5 April 2012

We thank the editor for the opportunity to revise the paper. Our work in response to the reviewers has already confirmed the need for major revisions, which we will undertake. We will reframe the paper in terms of a test of the hypothesis that there was a bifurcation in the climate system during the last deglaciation. We trust that our thorough responses to the referee comments are helpful and honest and indicate the direction in which changes will be made.
