Received and published: 7 December 2012

Dear authors,

As you will have seen, both reviews submitted to your manuscript are altogether positive. They provide a number of - very constructive - comments that need some further work to be addressed.

Therefore, I recommend that you submit a revised manuscript and explain in detail how you have addressed the reviewer’s comments and suggestions in a statement published in the public discussion.

I’m looking forward to seeing the revisions.

Best regards, Martin Melles (Guest Editor)
