

Interactive comment on “Modern sedimentation patterns in Lake El’gygytgyn, NE Russia, derived from surface sediment and inlet streams samples” by V. Wennrich et al.

D.-D. Rousseau (Editor)

denis.rousseau@lmd.ens.fr

Received and published: 27 July 2012

Dear Volker and colleagues, The two reviewers released their reviews and you must feel free to reply to them in the discussion phase as you are allow to do so. They are quite favorable for a publication but I would recommend you to follow their advises and comments in order to improve your manuscript. Besides specific comments both reviews are converging about the heavy metal issue that I would recommend you to consider seriously. The suggestion by Reviewer 2, Pierre Francus, to re-organizing the paper is an excellent one especially to get a better link with the other papers belonging to the special issue. So please revise accordingly your manuscript before the final

C950

submission to CP

All the very best
