

## ***Interactive comment on “The last 7 millennia of vegetation and climate changes at Lago di Pergusa (central Sicily, Italy)” by L. Sadori et al.***

**Anonymous Referee #2**

Received and published: 2 June 2013

The paper addresses important scientific question within the scope of Climate of the Past and I recommend its publication. The authors, based on the high resolution of their pollen record and palaeoclimate reconstruction, give a detailed image of the vegetation changes over the last millenia and carefully discuss the role of human impact and climate change. The overall presentation of the data is well structured and clear. Few suggestions to improve the manuscript appear in the attached file with the most important being 1) a minor language polishing (including some misspellings) and 2) addition in methods (pollen analysis) a comment about pollen concentration calculations.

Please also note the supplement to this comment:
