

Interactive comment on “Late Holocene summer temperatures in the central Andes reconstructed from the sediments of high-elevation Laguna Chepical, Chile (32° S)” by R. de Jong et al.

Anonymous Referee #2

Received and published: 2 July 2013

Dear Editor Dr. Joel Guiot, Journal: CP Title: Late Holocene summer temperatures in the central Andes reconstructed from the sediments of high-elevation Laguna Chepical, Chile (32°S) Author(s): R. de Jong et al. MS No.: cp-2013-48 MS Type: Research Article This paper provides new and valuable Paleoenvironmental data for Laguna Chepical and therefore has the potential for making a good contribution to the knowledge of the temperature reconstructions for the Late Holocene of South America. However the age model does not provide good curve (see the graphic bellow). It would be better to reproduce de age model with new better dates.

This manuscript has been very well written. Besides there are technical/typing errors: Page 2281 Line17: is not Fig. 1c Line25: the cite (www.mineria.gov.ar) is not in the C1346

Manuscript Evaluation Criteria Principal Criteria Excellent (1) Good (2) Fair (3) Poor (4) Scientific Significance:1 Does the manuscript represent a substantial contribution to scientific progress within the scope of Climate of the Past (substantial new concepts, ideas, methods, or data)? 1 Scientific Quality:1 Are the scientific approach and applied methods valid? Are the results discussed in an appropriate and balanced way (consideration of related work, including appropriate references)? 1 Presentation Quality:1 Are the scientific results and conclusions presented in a clear, concise, and well-structured way (number and quality of figures/tables, appropriate use of English language)? 1 appropriate use of English language)? 1

Dear Editor, this is my only comment, and I recommend that this article should be published in Climate of the Past, after minor revisions.

Best regards.
