Received and published: 12 July 2013

I have now received two solicited reviews and a lengthy additional comment. There is an additional reviewer who may still provide a review in the next 3 days: if it does not appear by then you can assume it is not coming.

The reviewers make many valuable comments, most of which are designed to clarify technical issues in the very complex subject. While there are a lot of comments, none of them are fatal. I therefore encourage you to produce a revised version of the

C1439

paper for CP. Please do thoroughly consider how to take each comment into account: even where you disagree with the reviewer (as seems to be the case for a few of the comments), it will still be valuable for the reader of a review paper like this to be exposed to the alternative view and the reason why you think it is invalid.

I look forward to seeing your revised paper.

Eric Wolff
