Received and published: 26 July 2013

I agree with the three reviewers that this is a clear, well-organised paper, the topic is timely and of widespread interest, the study is well-conducted and the results are relevant. Therefore, I'd like to encourage the authors to submit a revised version. No major issues have been raised by the reviewers, but they provide many suggestions for improving the paper. Please examine the reviews and address each of the points. You should revise the manuscript in line with the reviewers' comments, or provide well-argued reasons for not revising the manuscript.

I am looking forward to seeing the revised version soon!
