

***Interactive comment on “A Last Glacial Maximum
world-ocean simulation at eddy-permitting
resolution – Part 1: Experimental design and basic
evaluation” by M. Ballarotta et al.***

G. Lohmann (Editor)

gerrit.lohmann@awi.de

Received and published: 20 March 2013

Please make the revisions and follow the suggestions from the referees. Part 1 and 2 shall be combined in one paper which should have more substance. The referees acknowledge the potential of the approach. However, the paper needs major revisions, e.g. the discussion parts were not very elaborated. I guess the authors will need 3-6 months for their revisions in order to make a good paper for CP.
