Many thanks to the reviewers for reading my manuscript.

I appreciate the great detailed review of reviewer #2 and the recommendations of reviewer #1. All these comments will help to improve significantly the manuscript. We will combine the two manuscripts into one. We could remove the comparison with the present-day ocean state and the deep ocean analysis as suggested by reviewer #1 (part 1). The reduction of the number of figure from part one will allow to add statistical analysis and extend the discussion of the results.
