Received and published: 12 November 2013

Dear Dr. Chen, We have now received two reviews of your manuscript. As you might have noticed that though both the reviewers have appreciated the work, they have suggested to include additional data (Reviewer 1: JJA precipitation and surface wind climatology of the control experiment in Fig. 2), and model runs (Reviewer 1: conduct another set of experiment where effect of air-sea interaction, i.e. changes in SST can be evaluated), as well as to explain a few of the points mentioned in the manuscript and to add additional references.

In view of the comments, we request you to revise and resubmit the manuscript. Please upload your reply to reviewers' comments, with detailed point-wise response.

C2535

Looking forward for your response.

With warm regards

Sincerely yours Handling Editors
