Received and published: 14 December 2013

Two referees have now assessed the manuscript. Both referees are positive about the scientific value and significance of the study. However, they raise concerns about a lack of precision and clarity, particularly in the discussion section. Referee #1 also indicates a need for the text of the manuscript to be edited.

Therefore, we invite the authors to submit a revised version of the manuscript and to respond - point by point - to the referees's comments.
