

Interactive comment on “What controls the isotopic composition of Greenland surface snow?” by H. C. Steen-Larsen et al.

EW Wolff (Editor)

ew428@cam.ac.uk

Received and published: 18 December 2013

As you will see your paper has been reviewed by two experts, both of whom are very positive about it. They both make a lot of suggestions for minor improvements which you have already responded to. As the discussion period is drawing to a close, I am happy to encourage you to submit a revised version of the paper for CP itself. (However you will have to wait for the discussion period to end in case there are further comments from the existing reviewers or from any other commenters.) Thanks for submitting this paper to CP - it does not make our life interpreting isotopic records any easier but it poses interesting challenges which I hope the ice core and modelling communities will take up.
