

Interactive comment on “Late Glacial-Holocene climatic transition record at the Argentinian Andean piedmont between 33–34° S” by A. E. Mehl and M. A. Zárate

A.-L. Daniau (Editor)

al.daniau@epoc.u-bordeaux1.fr

Received and published: 6 January 2014

The manuscript has been assessed by two referee’s reports (J.-H. May and M. Zech) and one short comment (P. Sanborn). All are positive about the scientific value and significance of the study. The reviewers have made a number of detailed suggestions to improve clarity and low of the manuscript. They raise concerns about a lack of detailed arguments concerning parts of the discussion section. The discussion section may also profit from restructuring in form of sub-sections. Therefore, we invite the authors to respond to the referees’ comments and submit a revised version of the manuscript following their comments and technical corrections.
