Comments of anonymous referee mainly concern the regional discussion and particularly information from records located in western Central Chilean Patagonia. We greatly appreciate his/her detailed comments since his/her remarks help us to go deep inside and understand some key information from this area and therefore from Central Chilean Patagonia.

We carefully checked all the imprecise or erroneous interpretations he/she mentioned and tried to clarify, correct them and include pertinent new references when needed. When detailed information regarding the records was asked to be included (such as in

C3115

the Late Glacial section), we did so.

We decided to replace some terms in the discussion section to avoid confusion. We replaced Last Glacial Maximum Termination by Late Glacial and Deglaciation by Late Glacial-Holocene transition. We also corrected the terms in Fig. 6.

We added the location of Mallín El Embudo and Lago Shaman in Fig. 1c and change the patterns of sandy-silt with peat in Fig. 2.
