Dear Dr Brücher, I carefully read the comments of the three reviewers to your manuscript entitled “Comparing modelled fire dynamics with charcoal records for the Holocene”

I agree with the them that it is an interesting and greatly needed model-data comparison of Holocene global fire history. The methodological approach is sound and appropriate, and I see that you already replied carefully to their constructive comments.

I would therefore suggest you to submit a revised version of the manuscript that will be re-considered by myself for the final publication in CP

Best Regards, Carlo Barbante
