Dear Editor,

please find attached the response to reviewers' comments, along with a revised version of the manuscript and a new supplement file. The main suggestion of the reviewers to include two supplementary datasets (tree cover and burned area based on remote sensing) is discussed in the file `response_to_reviewers.pdf`. We have included a map of observed burned area in the Supplement. We present new figures from the MODIS dataset in the discussion file, but we have decided to keep the biome map in the revised version of the manuscript, since no dataset including not only observed tree fractions but also grass and bare soil fractions is available.
