Received and published: 16 April 2013

This paper is a valuable contribution to the Lake El’gygytgyn science community but the text is in need of major revision if it is to be published. Reviewer 1 offers ideas on reorganization and Reviewer 2 suggests rejection of the paper. I would like to suggest that you take all of the comments from both reviewers to heart and make revisions and restructuring of the paper. The paper will also need english corrections.

After you resubmit, the paper will likely be sent out for additional review beyond the editors. Let me emphasize that the paper is important and revision is possible. You have one month to make revisions, please let me know if that is possible in your timeframe.
