

***Interactive comment on “The last 7 millennia of vegetation and climate changes at Lago di Pergusa (central Sicily, Italy)” by L. Sadori et al.***

**Anonymous Referee #1**

Received and published: 29 April 2013

Sometimes the ideas are good, the results are enough. The paper needs minor revision. Some technical aspects must be corrected (see the attached file) and presentation of results must be improved. The chapter becomes very tiresome.

As the information is of good quality, the article is rigorous and concentrates on objective and technical concerns to determine the climate and vegetation for the last 6000 years. It is well conceived and well executed.

Please, take into account the comments in the attached file.

Sincerely
