

Interactive comment on “On the effect of orbital forcing on mid-Pliocene climate, vegetation and ice sheets” by M. Willeit et al.

A. M. Haywood (Editor)

eamah@leeds.ac.uk

Received and published: 28 May 2013

This manuscript has received two reviews and the discussion phase will end soon.

The authors should now post their responses to the two reviewer's comments to allow sufficient time for their response to be considered and commented on if required.

I have requested a two week extension to the open discussion period to facilitate this.

Alan Haywood
