Dear authors,

We have received two reviews of your paper. You can see that the main criticism concerns the difficult to understand the goals of the paper and its added value. They think that there is potential in this paper but you have some work to do to clarify these points. You have now to post replies to all the comments, and to prepare a revised version of your paper accordingly. In the revised version, I would like to see your corrections in track change mode.

Best regards
