We thank referee #1 for the constructive comments which helped improve the manuscript. About the general comments:

1. We improved Figure 1 as suggested. 2- Currently we do not have a photo of the 591 ma.s.l. terrace fragment adjacent to Lago Edita. 3- The conceptual model, understood as a sequence of sketch maps showing ice margin, lake level, and vegetation distribution in the region at various time slices, requires information we currently do not have. Because we have not mapped geomorphic features we decided not to include such conceptual model. 4- We edited the introduction following referee #1's suggestions.

About the specific comments:

C1

We incorporated all of the suggested changes in the text.
