Received and published: 22 March 2018

Thank you for the opportunity to respond to the suggestions from both of the reviewers. We have substantially changed the paper, including combining sections in the discussion, expanding out discussion of the possible atmospheric influences, and comparing our results with other Antarctic biomass burning records. We also substantially altered Figure 4, accordingly (attached file). Due to these changes, we rewrote the abstract and conclusions. We can understand if these changes require the paper to be sent out for review again, and welcome any opportunity to improve our work.
