

Interactive comment on “Periodic input of dust over the Eastern Carpathians during the Holocene linked with Saharan desertification and human impact” by Jack Longman et al.

J. Longman

jack.longman@northumbria.ac.uk

Received and published: 27 February 2017

Firstly, we thank the reviewer for their constructive comments and suggestions and we will endeavour to address them all. With regards to the reviewer’s general comments, discussion of uncertainty within peat-based dust records is something we will add to the manuscript, and we will attempt some grain size analyses of the events themselves. However, the low mineral content of the peat may make these analyses difficult. Regarding the more specific comments, we will adapt figures accordingly, ensure all text is clear and coherent, and fill any gaps regarding interpretation or explanation (e.g. type of interpolation for wavelet analysis).
