Interactive comment on "Eurasian contribution to the last glacial dust cycle: how are loess sequences built?" *by* Denis-Didier Rousseau et al.

Denis-Didier Rousseau et al.

denis.rousseau@lmd.ens.fr

Received and published: 23 June 2017

Dear colleague, First of all thank you for your comments about our manuscript. I would like to take all the blame for the typos and mistakes remaining in the text that you noticed. They are already corrected in the preliminary revised version of our paper. As you noticed as well, this paper is the follow-up of our recently released paper Rousseau et al. 2017 and we will provide more information to make the link between both manuscripts easier: this concerns either the comparison between European and Chinese loess sequences but also the visual vs algorithmic approaches applied to investigate the Greenland interstadials.

All the very best
