Received and published: 3 October 2017

Dear authors

your manuscript has now been seen by two expert reviewers, which both regard your paper as a significant contribution to the question of the phasing between gas (CO₂) and ice (temperature) ice core records.

However, both reviewers also criticize your time series analytical approach for the end of the transition/beginning of the Holocene. Accordingly, in your reply to these reviewer comments, please include a detailed strategy how you can improve on or avoid this issue in a revised manuscript. This will be essential for the further process of the manuscript. Please also include a one-to-one reply to all other issues raised by the
