Received and published: 20 December 2018

Having two positive review comments at hand the manuscript by Menviel et al. appears to be suitable in general for publication. However, during the discussion phase, the issue was raised that the present manuscript, as a paper describing an experimental protocol, would fit much better in the GMD section of the inter-journal SI. After some discussion with other editors and co-authors I therefore recommend that the authors seek a transfer from CP to GMD. As a protocol for a PMIP4-endorsed experiment (see authors' comments) the paper is certainly well suited for the SI. The manuscript may need some modifications to meet GMD requirements, but a new review round could be

C1

faster if the referees serving for the CP submission would be willing to re-assess the paper in the GMD process.
