Received and published: 28 December 2018

Dear Dr. Jones and co-authors,

The discussion period for your manuscript is now over, and two reviewers have posted comments. Both reviewers appreciated the depth of the dataset you compiled, and agreed that the underlying research question is valuable. There was also consensus that your manuscript would be strengthened by a more critical assessment of the individual records in your compilation, in terms of potential non-volcanic factors that complicate interpretation of the individual Hg and Hg/TOC records.

Please respond to the reviewer comments in the online Discussion forum. If you make any changes to your manuscript, please clearly indicate the nature of these changes

in your response. Once I have reviewed your response, I fully anticipate inviting you to submit a revised manuscript for a final decision.

Sincerely, Alberto Reyes
