

Interactive comment on “Spatial pattern of accumulation at Taylor Dome during the last glacial inception: stratigraphic constraints from Taylor Glacier” by James A. Menking et al.

James A. Menking et al.

menkingj@oregonstate.edu

Received and published: 13 November 2018

Due to a large number of changes to the original manuscript, we prepared this document summarizing the major revisions so that the editor and referees might more easily understand how we are addressing the referee comments and criticisms. We summarized recurring criticisms that came up in multiple reviewers' comments, and we describe in detail how we intend to address those criticisms in the revised manuscript. Please find this summary in the attached supplement.

Please also note the supplement to this comment:
