

Interactive comment on “The role of elevated atmospheric CO₂ and increased fire in Arctic amplification of temperature during the Early to mid-Pliocene” by Tamara Fletcher et al.

Tamara Fletcher et al.

tamara.fletcher@umontana.edu

Received and published: 16 October 2018

Please find attached as a PDF our point by point reply to the concerns raised in the supplemental files provided in Prof. Schweger’s comment. Also included are pdfs of the most recent version of the manuscript and supplemental files showing detail of the changes made in response to all reviewer comments (versions in reply to earlier comments do not include changes in response to Prof. Schweger). Line numbers refer to the discussion paper rather than the revised text.

Thank you for the time invested in consideration of our manuscript.
