

***Interactive comment on “Relationships between low-temperature fires, climate and vegetation during the last 430 kyrs in northeastern Siberia reconstructed from monosaccharide anhydrides in Lake El’gygytgyn sediments” by Elisabeth Dietze et al.***

**Anonymous Referee #1**

Received and published: 5 December 2019

“previous studies also suggested that some wildfire occurs mainly during the transition of glacial-interglacial variations”. I cannot remember the exact references. You could also check on the literature. Here I could provide a publication from Bird and Cali (Nature, 1998; Global and Planetary Change, 2002, 73-76) for your reference.

"combustion efficiency is more related with the fire intensity"; Please see references from some aerosol studies such as Christian et al., 2003, JGR,

doi:10.1029/2003JD003704; Yokelson et al., 2011, ACP, 6787–6808; etc and from a wildfire study from Han et al., 2016, Scientific Report, DOI: 10.1038/srep19151.

I really think that you did a good work.
