

Supplemental Figure 1: A map of PMDI values for the instrumental data, ORV, and LBDA reconstructions for the year 1988. The histogram represents frequency of PMDI values for the instrumental, ORV, and LBDA PMDI values. The mean absolute error values show that the ORV reconstruction better matches the instrumental data compared to the LBDA reconstruction. White grids represent areas over water and therefore no data.

Supplemental Figure 3: A map of PMDI values for the instrumental data, ORV, and LBDA reconstructions for the years 1945-1951. The histogram represents frequency of PMDI values for the instrumental, ORV, and LBDA PMDI values. The mean absolute error values show that the ORV reconstruction better matches the instrumental data compared to the LBDA reconstruction. White grids represent areas over water and therefore no data.

Supplemental Figure 3: A map of PMDI values for the instrumental data, ORV, and LBDA reconstructions for the year 1936. The histogram represents frequency of PMDI values for the instrumental, ORV, and LBDA PMDI values. The mean absolute error values show that the ORV reconstruction better matches the instrumental data compared to the LBDA reconstruction. White grids represent areas over water and therefore no data.

Supplemental Table 1: List of tree ring chronologies included in the ORV reconstruction.
