please consider adding reference to the following paper:

Franceschi, M., Dal Corso, J., Cobianchi, M., Roghi, G., Penasa, L., Picotti, V., Preto, N., 2019. Tethyan carbonate platform transformations during the Early Jurassic (Sinemurian-Pliensbachian, Southern Alps); comparison with the Late Triassic Carnian Pluvial Episode. GSA Bulletin 131 (7/8). <https://doi.org/10.1130/B31765.1>.

this paper reports extensive $\delta^{13}\text{C}_{\text{carb}}$ record and also $\delta^{13}\text{C}_{\text{org}}$ data calibrated with

nannoplankton biostratigraphy and ammonoid occurrences across the Sinemurian-Pliensbachian interval from the Lombardian Basin and Trento Platform and highlights the SPBE and also a negative $\delta^{13}\text{C}$ shift that is correlated to that identified by Masetti et al. (2017) and corresponding to the "Liasidium Event" of Riding et al. (2013) and Hesselbo et al. (2020)
