

We have gone through the manuscript and edited a few minor spelling, grammatical, and formatting issues. We also made one small change to Figure 6 to make it clearer. The new version of this figure includes stratigraphic levels for two faunal events (B-1 and B-2) in the field area. Showing it this way helps to summarize one of our main conclusions – that the faunal events and CIEs occur near the same levels – and it does not change any of our original results, interpretations, or conclusions. The text now also includes a final DOI and link to the supplemental data housed in OSF.
