

Derivation of Eq. (6):

$$\begin{cases} \frac{\text{ssCa}^{2+}}{\text{ssNa}^+} = R_m \\ \frac{\text{nssCa}^{2+}}{\text{nssNa}^+} = R_t \end{cases}$$

\Rightarrow

$$\begin{aligned} \text{Ca}^{2+} &= \text{ssCa}^{2+} + \text{nssCa}^{2+} \\ &= R_m \text{ssNa}^+ + R_t \text{nssNa}^+ \\ &= R_m \text{ssNa}^+ + R_t (\text{Na}^+ - \text{ssNa}^+) \end{aligned}$$

\Rightarrow

$$(R_t - R_m) \text{ssNa}^+ = R_t \text{Na}^+ - \text{Ca}^{2+}$$

\Rightarrow

$$ssNa^+ = \frac{R_t Na^+ - Ca^{2+}}{R_t - R_m} = \frac{Na^+ - \frac{Ca^{2+}}{R_t}}{1 - \frac{R_m}{R_t}}$$

\Rightarrow

$$\begin{aligned} nssCa^{2+} &= R_t(Na^+ - ssNa^+) \\ &= R_t Na^+ - \frac{R_t Na^+ - Ca^{2+}}{1 - \frac{R_m}{R_t}} \\ &= \frac{Ca^{2+} - R_m Na^+}{1 - \frac{R_m}{R_t}} \end{aligned}$$
